This is the detective story of a supernova's death, which is the wedge into the evidence gathering. I give the Cosmologists version of what happens, which I dismiss as nonsense, then offer a fact base explanation of the most impressive event known to humans. While that sinks in, I shift to providing a short history of how Gravity has been treated by the two main actors in physical theory (Newton and Einstein) over 3 centuries. Between them was a man (Le Sage) who offered a plausible kinetic theory. Since the 'pull' theory of Newton and the curvature of space (depicted by a 'stretched' rubber membrane) didn't come close to showing us mechanically how gravity did it's work, looking at how various forces compare might provide us with clues. The description of gravity, rocket acceleration and centrifuges all look alike and lead us to a need for a kinetic solution. Returning to the supernova explosion, the 'types' of explosions that we know about are balloons popping to chemical to nuclear. These explosions provide us with their exponentially scaled outputs, light and 'volume' of stuff. Everyone is impressed with the light, but the huge additional stuff is the 'key' insight. This stuff is Aether Particles. The accumulating of these particles is the process of gravity.
