Air Structures (Form + Technique)

William McLean, Pete Silver

Air Structures (Form + Technique) William McLean, Pete Silver

Air can be used in a variety of ways to make lightweight, flexible structures. It can be used to make inflatable structures, mobile structures, and temporary buildings, it can also activate movable elements and act as a means of constructing buildings that would be impossible with conventional construction methods.

This book looks at every facet of the subject, examining the different types of air structure: super pressure buildings, air beam structures, buoyant structures, inflatable structures, and many more. It also looks at the construction methods that use air, such as air-inflated steel, aerated concrete and blow moulding.

Filled with photographs, models, drawings, and diagrams, this is the ideal book for curious students, designers and architects.
