Stochastic Population and Epidemic Models: Persistence and Extinction (Mathematical Biosciences Institute Lecture Series)

Linda S. Allen

Stochastic Population and Epidemic Models: Persistence and Extinction (Mathematical Biosciences Institute Lecture Series) Linda S. Allen

This monograph provides a summary of the basic theory of branching processes for single-type and multi-type processes. Classic examples of population and epidemic models illustrate the probability of population or epidemic extinction obtained from the theory of branching processes. The first chapter develops the branching process theory, while in the second chapter two applications to population and epidemic processes of single-type branching process theory are explored. The last two chapters present multi-type branching process applications to epidemic models, and then continuous-time and continuous-state branching processes with applications. In addition, several MATLAB programs for simulating stochastic sample paths are provided in an Appendix.

These notes originated as part of a lecture series on Stochastics in Biological Systems at the Mathematical Biosciences Institute in Ohio, USA.

Professor Linda Allen is a Paul Whitfield Horn Professor of Mathematics in the Department of Mathematics and Statistics at Texas Tech University, USA.

From reader reviews:

Dan Maes:

Information is provisions for people to get better life, information these days can get by anyone at everywhere. The information can be a know-how or any news even restricted. What people must be consider any time those information which is inside the former life are challenging be find than now's taking seriously which one is appropriate to believe or which one the resource are convinced. If you obtain the unstable resource then you have it as your main information you will see huge disadvantage for you. All of those possibilities will not happen within you if you take Stochastic Population and Epidemic Models: Persistence and Extinction (Mathematical Biosciences Institute Lecture Series) as your daily resource information.

Wilma Blue:

A lot of people always spent all their free time to vacation or even go to the outside with them friends and family or their friend. Were you aware? Many a lot of people spent they will free time just watching TV, or perhaps playing video games all day long. If you would like try to find a new activity honestly, that is look different you can read any book. It is really fun for you personally. If you enjoy the book that you just read you can spent the entire day to reading a reserve. The book Stochastic Population and Epidemic Models: Persistence and Extinction (Mathematical Biosciences Institute Lecture Series) it doesn't matter what good to read. There are a lot of people who recommended this book. They were enjoying reading this book. If you did not have enough space to deliver this book you can buy the particular e-book. You can m0ore quickly to read this book from a smart phone. The price is not to fund but this book has high quality.

Elizabeth Hager:

Do you one of the book lovers? If so, do you ever feeling doubt if you find yourself in the book store? Aim to pick one book that you never know the inside because don't ascertain book by its handle may doesn't work at this point is difficult job because you are scared that the inside maybe not since fantastic as in the outside appear likes. Maybe you answer is usually Stochastic Population and Epidemic Models: Persistence and Extinction (Mathematical Biosciences Institute Lecture Series) why because the excellent cover that make you consider regarding the content will not disappoint a person. The inside or content is actually fantastic as the outside or even cover. Your reading sixth sense will directly direct you to pick up this book.

Shawn Clay:

Reading a e-book make you to get more knowledge from the jawhorse. You can take knowledge and information from your book. Book is created or printed or highlighted from each source in which filled update of news. On this modern era like at this point, many ways to get information are available for you. From media social similar to newspaper, magazines, science guide, encyclopedia, reference book, story and comic. You can add your understanding by that book. Do you want to spend your spare time to spread out your book? Or just seeking the Stochastic Population and Epidemic Models: Persistence and Extinction

(Mathematical Biosciences Institute Lecture Series) when you required it?
